Most of satellite radio's subscribers are, like me, over the road truck drivers. We benefit from satellite radio programming, and it's weather and traffic channels. It helps us avoid problems in major metropolitan areas before we arrive in that city because we can hear of the problem farther away than broadcast (AM & FM) signals carry. We pay for satellite radio. WHY should the National Association of Broadcasters be allowed to have any say in what I pay for? I respectfully ask the FCC to reject the NAB's petition 04-160. Thank you.
